SpringMath Theory of Change

SpringMath is web-based guidance to assess skills, deliver intervention, monitor progress, and adjust intervention weekly.

³Haring, N. G., & Eaton, M. D. (1978). Systematic instructional procedures: An instructional hierarchy. In N. G. Haring, T. C. Lovitt, M. D. Eaton, & C. L. Hansen (Eds.), *The fourth R: Research in the classroom* (pp. 23–40). Columbus, OH: Merrill.

Burns, M. K., Codding, R. S., Boice, C. H., & Lukito, G. (2010). Meta-analysis of acquisition and fluency math interventions with instructional and frustration level skills: Evidence for a skill-by-treatment interaction. *School Psychology Review*, 39, 69-83. This meta-analysis demonstrated that when instructional tactics were aligned with student proficiency, learning improved and when instructional tactics were mis-aligned with student proficiency, learning declined. Burns and colleagues called this the “skill-by-treatment” interaction which is, in effect, an empirical demonstration of the Instructional Hierarchy.

Burns, M. K., VanDerHeyden, A. M., & Jiban, C. (2006). Assessing the instructional level for mathematics: A comparison of methods. *School Psychology Review*, 35, 401-418. In this study, Burns and colleagues demonstrated that attaining mastery level performance was associated with skill retention over time, generalization, and faster learning of more complex, related skills.
